The LID™, a hydraulic flip tarp system, is the newest innovation from Aero Industries, the leading manufacturer of tarping systems and accessories. The LID blows away the competition with all of its features and benefits:

the lid

HYDRAULIC FLIP TARP

- Hydraulic operation eliminates the hand-crank method and saves time.
- Covers and uncovers loads in just 15-20 seconds.
- Continuous-pin hinges increases frame strength and reduce hinge pressure.
- Sleek front assembly fits neatly behind an attractive wind deflector.
- High-strength frame designed and built for harsh conditions.

Powerful Front Assembly

Aero Industries' The LID puts a lid on the competition. A comparison:

the lid

HYDRAULIC FLIP TARP

- Uses a drive shaft design to increase strength.
- Assembles with just 16 bolts and 13 welds.
- Hinge locations can be moved to fit your trailer.
- Hydraulic mechanism receives its hydraulic pressure from the wet lines on your trailer (optional conversion kit for tippers).
- Tarp Frame has one additional arm to minimize tarp sag.

Donovan's Sidewinder:

- Uses a ladder-type design that flexes and twists during cycling.
- Requires 25 bolts and 27 welded joints during installation.
- Fixed hinges that can't be moved.
- Requires 12 volts of electricity to operate.
- Fewer frame arms allow more tarp sag.
